-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 25 November 2005.
- 2a) ☒ This action is FINAL. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-11, 14-24 and 26-36 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-11, 14-24 and 26-36 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 26-36 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The specification describes three separate elements: a covering layer, an inorganic substrate and an organic substrate, wherein the covering layer 30 bonds the inorganic substrate 10 to the organic substrate 20. There is no support in the specification for a covering layer fully embedding said inorganic substrate in said organic substrate.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 26-36 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The claimed limitation of a covering layer fully embedding said inorganic substrate in said organic substrate, as recited in claim 26, is

Art Unit: 2811

unclear as to how a separate element (a covering layer) can embed a second element (an inorganic substrate) in a third distinct element (an organic substrate).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-5, 7-11, 14-18, 20-24, 26-30 and 32-36, as best understood, are rejected under 35 U.S.C. 103(a) as being unpatentable over Berger et al. (6,528,145) in view Nishide et al. (5,827,605) and Zak (6,006,427).

Berger et al. in figure 3 and related text a composite laminate substrate, comprising:

at least an inorganic substrate 20 having at least a wiring 26 formed thereon; and

two substrates, comprising print circuit boards (column 10, lines 32-45 and column 12, lines 44-46) integrated with the at least an inorganic substrate, having circuits for electrical connections between outer input/output ports and said wiring of said inorganic substrate through said print circuit boards (substrates), and at least one bonding layer (BGA) bonding said inorganic substrate and said print circuit board (substrate).

Berger et al. do not teach the print circuit boards being organic print circuit boards and at least a passive component formed in/on the inorganic substrate.

Art Unit: 2811

Nishide et al. teach in figure 1 and related text an inorganic substrate 1, 2 having at least a passive component 4, 5, 8 selected from a group consisting of capacitor, inductor and resistor, formed therein/thereon, and circuits for electrical connections between outer input/output ports and said passive component of said inorganic substrate.

Zak teaches print circuit boards being organic print circuit boards, and the advantages of using organic print circuit boards (column 2, lines 40-45).

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to use organic print circuit boards and at least a passive component formed on the inorganic substrate in Berger et al.'s device, such that two organic substrates, located on two sides of said inorganic substrate, having electrical connections between outer input/output ports and said passive component of said inorganic substrate through said organic substrates, in order to reduce the cost of making the device and in order to reduce the size of the device by forming the two organic substrates on both sides of said inorganic substrate and by forming the passive elements within the inorganic substrate, respectively.

Regarding claims 2, 15 and 27, prior art teaches the material of said inorganic substrate is selected from the group consisting of ceramic, silicon and glass.

Regarding the process limitations recited in claims 3-4, 7-8, 11, 16-17, 20-21, 24, 28-29, 32-33 and 36 ("passive component is made from the process selected from the group

Art Unit: 2811

consisting of thick film process and thin film process”, “passive component is made from a semiconductor fabrication process”, “the circuit of the print circuit boards are made separately, and then stacked together to form said organic substrates, ” the circuit of the print circuit boards are made separately, then stack the print circuit boards together, and finally form the circuit of a surface layer with build-up process to form said organic substrates”, and “wherein said organic substrate is made on said inorganic substrate with build-up process”, these would not carry patentable weight in this claim drawn to a structure, because distinct structure is not necessarily produced.

Note that a “product by process” claim is directed to the product per se, no matter how actually made, *In re Hirao*, 190 USPQ 15 at 17 (footnote 3). See also *In re Brown*, 173 USPQ 685; *In re Luck*, 177 USPQ 523; *In re Fessmann*, 180 USPQ 324; *In re Avery*, 186 USPQ 161; *In re Wertheim*, 191 USPQ 90 (209 USPQ 554 does not deal with this issue); and *In re Marosi et al.*, 218 USPQ 289, all of which make it clear that it is the patentability of the final product per se which must be determined in a “product by process” claim, and not the patentability of the process, and that an old or obvious product produced by a new method is not patentable as a product, whether claimed in “product by process” claims or not. Note that the applicant has the burden of proof in such cases, as the above case law makes clear.

Regarding claims 9-10, 22-23 and 34-35, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to use at least a passive component on said organic substrate and selected from a group consisting of capacitor,

Art Unit: 2811

inductor and resistor in prior art's device in order to the device in an application which requires a passive element.

Regarding claim 26, since the covering layer covers the inorganic substrate and is integrated with said organic substrate (that is, sandwiched there between), and fully embedding said inorganic substrate in said organic substrate, then it is understood that the three elements are embedded within each other. Therefore, the top layer of Berger et al.'s substrate 22 can be considered as the bonding layer, and this layer covers the inorganic substrate (below it) and is integrated with said organic substrate (that is sandwiched there between), and fully embedding said inorganic substrate in said organic substrate, and said covering layer 22 further comprising circuits for providing electrical connections between said passive component and said organic substrate.

Claims 6,19 and 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Berger et al., Nishide et al. and Zak, as applied to claims 1 and 14 above, and further in view of Czjakowski et al. (6,613,978).

Berger et al., Nishide et al. and Zak teach substantially the entire claimed structure, as applied to claims 1 and 14 above, except each of said organic substrate is composed of a plurality of print circuit boards.

Czjakowski et al. teach a plurality of print circuit boards formed on a ceramic substrate. It would have been obvious to a person of ordinary skill in the art at the time the invention was made to form each of said organic substrate of a plurality of print circuit

Art Unit: 2811

boards, in the device of Berger et al., Nishide et al. and Zak, in order to use the device in an application which requires plurality of print circuit boards.

Response to Arguments

Applicant argues that the bonding layer of Berger et al. does not integrate the two substrates together, and the BGA layer does not form a bonding layer, but individual bonding points.

Applicant "integrates" the two substrates by bonding them together. It is unclear why the "bonding" of prior art's substrates does not integrate the two substrates together, and the bonding of the applicant's substrates integrates the two substrates together. Furthermore, although the BGA layer forms individual bonding points, each individual bonding point is a bonding layer. Therefore, Berger et al. teach a bonding layer, wherein the bonding layer integrates the two substrates together, as claimed.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

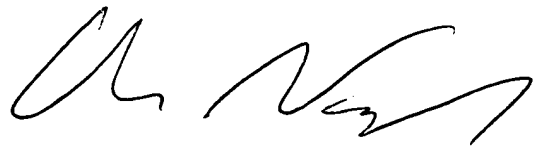

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ori Nadav whose telephone number is 571-272-1660. The examiner can normally be reached between the hours of 7 AM to 4 PM (Eastern Standard Time) Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eddie Lee can be reached on 571-272-1732. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.

Art Unit: 2811

For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

A handwritten signature in black ink, appearing to read 'Ori Nadav', is positioned above the printed name.
